

Case Study

Baldwin Filters, Kearney, Nebraska

PROBLEM

Baldwin Filters, a manufacturer of air filters experienced a critical failure, when a press that manufactures canister housings went down. To avoid consequential downtime, Baldwin called DSI/Dynamatic to see when a replacement unit could be obtained.

SOLUTION

Within a couple of hours, DSI/Dynamatic was able to pull the serial number records on the broken unit and quote a drop-in replacement – the only change was a minor difference in shaft diameter.

We shipped the unit out that afternoon on a straight shot truck and it arrived at Baldwin Filters the next morning – getting them back up and running with minimal down time.

We understand how critical down time is to your facility. We do our best to make sure that down time is minimal.
